

GE Aerospace

Military Products

— GE Aerospace delivers a range of military products and services to United States and Allied customers around the world, and conducts research and development associated with various military applications.

GE Aerospace's military products consist of components or subsystems, including:

- Engines and propellers for propulsion of military aircraft and engines for military vessels
- Open computing and networking, mission and flight management systems, and data products for military aircraft
- Power generation, distribution, and conversion for military aircraft and vessels
- Gears and other transmission components for military vehicles
- Non-explosive components and parts for weapons systems

Important missions

Military aircraft and vessels supported by GE Aerospace perform important national security, search and-rescue, and humanitarian missions. We do not manufacture, assemble, sell or service cluster bombs, land mines or nuclear weapons, or component parts of cluster bombs, land mines or nuclear payloads.

Compliant sales

GE Aerospace's military products and services are sold either directly to the US Department of Defense (DoD) or foreign government military agency, or indirectly to the DoD or foreign military as a subcontractor to another commercial entity. GE Aerospace obtains necessary approvals from all applicable authorities as part of its military sales.

GE Aerospace complies with all US export control laws, including the Arms Control Export Act, as well as with US Department of State and Commerce regulations governing these sales. GE Aerospace also complies with applicable export control laws and regulations in other countries from which it exports military equipment and services, and GE Aerospace only delivers to customers when sales are consistent with those laws and regulations. Each GE Aerospace business reviews its sales of military products and services, including sales to any foreign military customer, to ensure those sales comply with all applicable requirements.

Updated August 2025

The military aircraft and vehicles supported by GE Aerospace perform important national security, search and-rescue, and humanitarian missions.

In addition to delivering critical products and services, GE Aerospace conducts research and development associated with various military applications.
